

Name of the Committee/ Council:	<i>Disarmament and International Security Committee</i>
Agenda Item:	<i>Combating the proliferation of chemical and biological weapons of mass destruction</i>
Main Submitter:	<i>The United States of America</i>
Co-Submitters:	<i>The Kingdom of Bahrain, the Republic of Yemen, The State of Israel</i>
Signatories:	<i>the Kingdom of Bahrain, the French Republic, Federal Republic of Germany, the Republic of India, the State of Israel, Japan, the State of Qatar, the Kingdom of Saudi Arabia, the Republic of Türkiye, Ukraine, the Republic of Yemen, the Italian Republic, the Republic of Korea</i>

The Disarmament and International Security Committee,

Keeping in mind the importance of the United Nations Charter, especially Article 51,

Taking into account the principles of the Geneva Conventions and the core principles of humanitarian law, it brought,

Noting with deep concern the great dangers held by the mere presence of weapons of mass destruction and the minimal efforts that have been made in order to eliminate them,

Guided by the Chemical Weapons Convention in 1997 and the ban on development, production, and use of chemical weapons,

Having adopted the Biological Weapons Convention and the guidelines it states on how to implement a provision,

Recognising the effort made by international organisations such as the OPCW that helps keep transparency,

Keeping in mind the importance of Human Rights regarding the topic and the necessity to have them always as the main matter,

Welcoming efforts in this context by multilateral arrangements which contribute to non-proliferation,

Pointing out that every Member State is welcome to join the CWC and BWC,

Having devoted attention to the Syrian civil war and the use of weapons of mass destruction in the conflict,

Deeply concerned by the threat of terrorism and the risk that non-State actors may acquire, develop, traffic or use nuclear, chemical and biological weapons and their means of delivery, including the use of rapid advances in science, technology and international commerce to the end,

1. **Seeks** to move up the date of the revision committee due to exigent circumstances, such as the new Israel-Iran war, the continued Yemeni Civil War, and the Israel-Lebanon conflict, and further recommends to the BWC to take into consideration:
 - a. adding clear regulations about synthetic biology, AI and gene editing to prevent their misuse, while also addressing clear gaps,
 - b. defining and regulating the use of synthetic biology, ensuring that it is limited to peaceful and scientific purposes,
 - c. introducing specific guidelines on the application of artificial intelligence in biological research to prevent dual-use risks,
 - d. doing regular monthly voluntary checks on any storage facility in the Member States;

2. **Endorses** all member states to closely monitor and regulate the transport of chemical and biological agents through the increase of border checks and security by all Member States, by:
 - a. having special border checks specifically related to illegally transported chemical and biological agents,
 - b. adding stochastic checks for chemical and biological agents in airports, following the explosive materials procedure,
 - c. checking that the transport conditions for chemical and biological weapons are up to code,
 - d. restricting large quantities of illegal agents, with known uses tied to the creation of chemical and biological weapons of mass destruction,
 - e. using the official United Nations definition of illegal chemical and biological agents,
 - f. close monitoring the sources of transport related to chemical and biological agents;

3. **Calls for** developing digital safeguards that prevent AI models from generating recipes for toxic chemical agents or modified viruses by:
 - a. requiring AI developers to implement content-filtering systems that block requests related to the creation of toxic chemical agents or biological weapons,
 - b. integrating an advanced natural language capable of identifying harmful internet even when phrased differently,
 - c. continuously updating filtering databases to include newly discovered chemical and biological compounds,
 - d. mandating regular auditing and testing of AI models to ensure safeguards cannot be bypassed,
 - i. by having a third party do regular checks on AI systems at scheduled times,
 - ii. by simulating AI-driven attacks to test the safeguards,
 - e. encouraging collaboration between big technological companies to monitor unusual use of computing power for bio-chemical purposes;

4. **Proposes** the creation of a UNODA forum by the name of Chemical and Biological Weapons of Mass Destruction Forum (CBWMDC) regarding the topic of the proliferation of chemical and biological weapons of mass destruction, through:
 - a. composing the forum of 35 specialists from Member States,
 - b. biannual meetings of the forum, split into two parts, namely:
 - i. the chemical weapons-related meeting,
 - ii. the biological weapons-related meeting, one week apart,
 - c. detailed press releases regarding the matters discussed during the meetings, through United Nations press organs, namely:
 - i. UNODA press releases,
 - ii. UNODA meeting place,
 - iii. UNODA Publications Library;
5. **Proposes** enhanced regional cooperation, for all volunteering Member States, in order to facilitate transparency and mutual trust between nations that face the threat of unconventional weapons, regarding the proliferation of chemical and biological weapons through:
 - a. voluntary intelligence sharing between neighbouring nations, regarding Non-State actors that may possess or be in the process of developing chemical and biological weapons and that pose a direct threat to the region,
 - b. opening direct, chemical and biological weapon-related diplomatic channels between regional neighbours;
6. **Calls for** the creation of “Researchers Without Borders”, an international organisation composed of a board of 20 scientists of different nationalities that will change regularly and will inspect laboratories of countries that voluntarily agree to check for evidence of CWs and BWs, and, if most conditions are met, it is safe to declare that the inspected laboratory has produced CWs or BWs and evidence would be constituted by:
 - a. any equipment that can be used towards the purpose of creating CWs and BWs, and also has residues that would result from making such weapons,
 - b. checking the expertise of the scientists working at afore-mentioned laboratories, to verify if they have the necessary knowledge to develop such weapons,

- c. said laboratory not being inspected for a period of over 6 months for any reason;
- 7. **Endorses** the creation of a public database that will include all publicly available information, as well as all information acquired through inquiries from organisations such as the OPCW and “Researchers Without Borders”, in order to concentrate all information in one document, so it will be easier for the public to access information quickly;
- 8. **Seeks** the reinforcement of border control to regulate CWs and BWs transport, as well as to avoid inadvertent conflicts by:
 - a. recommending Member States to consider the implementation of Artificial Intelligence technologies such as Palantir for border control in order to:
 - i. identify new chemical and biological substances considered weapons more quickly, which would shorten the time frame in which these substances are banned,
 - ii. improving the efficiency of the identification of criminals who smuggle these substances,
 - iii. preventing criminals from entering the country,
 - iv. adding background searches for chemical and biological pathogens,
 - b. preventing any border crisis due to the illegal passing of any chemical or biological agents or weapons by implementing stricter regular border patrols,
 - c. implementing random searches for all vehicles that pass through said borders as well as a screening process before arriving at the border, in order to locate potential smugglers before they arrive;
- 9. **Calls for** the strengthening of legal international frameworks to prevent proliferation, by:
 - a. all OIC Member States, but not limited to, have to sign, ratifying and fully implementing the CWC, BWC and OPCW,
 - b. building a stronger trust relationship between the member states, they should all commit to a transparency mechanism, for which they will have to provide satisfactory reasoning for purchasing large amounts of chemicals or chemical weapons altogether,

- c. having the member states already sign and ratify the BWC, CWC and OPCW but failed to commit to the strict rules, and used or imported weapons of mass destruction, are eligible to sanctions;

10. **Encourages** the creation of the "Biological and Chemical Implementation Support Unit" program, hereinafter the BCISU, that allows for all nations threatened by chemical or biological weapons to safely defend against chemical and biological weapons on the battlefield, by:

- a. allowing all Member Nations, that have signed and ratified both the CWC and the BWC, to access their troops and militaries, within the limitations and possibilities of the program, and that are in direct threat of encountering chemical and biological weapons,
- b. providing aid to defend against chemical and biological weapons, such as but not limited to:
 - i. mobile medical care that can be administered on the battlefield for the side effects of chemical and biological weapons, such as antidotes and vaccines,
 - ii. decontamination facilities for military troops to deal with the aftermath of chemical and biological attacks,
 - iii. protective gear fit for the battlefield, such as, but not limited to, gas masks, hazmat suits and other protective materials;
 - iv. detection methods;
- c. collaborating between allied nations that have already developed protective measures against chemical and biological weapons, such as effective protective gear for current biological threats, vaccines and any other relevant material;

11. **Proposes** that volunteering developed countries work in collaboration with less developed countries, and offer their support regarding eliminating chemical and biological weapons in ways such as:

- a. providing them with advanced technologies to detect and destroy chemical and biological weapons in ways such as any chemical and biological weapons found on their territory,
- b. providing them with specially trained teams of experts to deal with situations such as new pandemics and unknown viruses;

- c. providing them with two dismembering facilities for CWs under UNODA, which are:
 - i. Incineration facility, following the model of the Toole facility,
 - ii. Neutralisation facility, made after the Colorado Facility, and dismembering CWs by neutralisation process followed by supercritical water oxidation (SCWO),
 - iii. designated to safely destroy pathogens and compounds;

12. **Calls for** the creation of the PCWMDC (Post Conflict Weapons of Mass Destruction Control), with the aim to closely monitor post-conflict areas, in countries voluntarily accepting the PCWMDC, with means such as but not limited to:

- a. monitoring that the CWC and BWC are respected,
- b. issue a report that the UN will address,
- c. support the reconstruction of damaged areas;

13. **Encourages** the strengthening and expansion of medical aid related to chemical and biological weapons of mass destruction, through:

- a. providing aid to victims of chemical and biological weapons of mass destruction through joint research initiatives focused on treatments,
- b. providing specialised training for medical personnel in the identification and treatment of such threats,
- c. providing Member States with the necessary equipment to:
 - i. treat potential victims of chemical and biological WMDs,
 - ii. decontamination of affected areas,
- d. increasing funding for hospitals and emergency medical units to better handle chemical and biological incidents,
- e. financial funding by voluntary donations from Member States,
- f. supporting research and development of new treatments and vaccines for chemical and biological agents;

14. **Seeks** to remain actively seized on the matter.
